

BRIGHT LEARN

COFFEE SHOP

CASE STUDY

Presentation by Mbali

ABOUT BRIGHTLEARN COFFEE

Bright Coffee Shop has recently appointed a new CEO with a clear mission: **to grow revenue** and **improve product performance**. As part of this initiative, I conducted a detailed sales analysis using SQL, Excel, and visualization tools.

This case study explores:

- Which products generate the most revenue,
- Identifies peak sales times
- Highlights overall sales trends.

The insights presented here will guide strategic decisions on marketing, inventory, and customer engagement to strengthen the shop's performance.

TOTAL REVENUE PER MONTH

Total Revenue per Month

SO WHAT ?

BrightLearn Coffee Shop should **prepare for peak demand during winter by increasing inventory, staffing, and targeted promotions.**

Leveraging seasonal preferences—such as hot beverages and comfort foods—can maximize profitability.

Monthly revenue shows a steady upward trend from January through June, with the **highest revenue recorded in June (R166,465)**. The sharp increase from March to April and continued growth into winter suggests **strong seasonal demand, with colder months driving higher sales.**

PRODUCT CATEGORY TOP PERFORMERS

TOP PERFORMERS

- 1. **Coffee:** Columbian Medium Roast Lg with 3,013 units sold.
- 2. **Tea:** Earl Grey Rg with 3,053 units sold.
- 3. **Bakery:** Chocolate Croissant with 3,076 units sold.

The analysis highlights that **roasted coffee and tea** are the strongest revenue drivers, with bakery contributing steadily as a supporting category. Within product types, the top performers are **Columbian Medium Roast (coffee), Earl Grey Regular (tea), and Chocolate Croissant (bakery)**. These results show customer preference for classic, recognizable options, while lower-revenue items may require targeted promotion or reconsideration in the menu mix.

LOWEST PERFORMING PRODUCT CATEGORY : PACKAGED CHOCOLATE

Packaged chocolate is the weakest category overall, with sales spread across just three flavors. The organic option sells the most, followed by Chili Mayan, while Dark Chocolate performs the worst. This shows that customers lean toward unique or specialty flavors, and the **weaker products may need promotions, pairing with stronger categories, or even removal from the menu.**

TOTAL REVENUE PER STORE LOCATION

Hell's Kitchen emerges as the **most profitable store location**, driven by strong sales in coffee, tea, and bakery products.

Top performing products in Hells Kitchen in terms of products sold:

- 1.Coffee: 20 187 products sold
- 2.Tea: 15 277 products sold
- 3.Bakery: 7617 products sold

LOWEST PERFORMING STORE LOCATION: LOWER MANHATTAN

In contrast, **Lower Manhattan** shows **weaker performance**, with **packaged chocolates, loose tea, and flavours** contributing little to overall revenue.

This comparison highlights how product mix and customer preferences vary by location, suggesting that focusing on high-demand categories while addressing underperforming items could improve overall store profitability.

TOTAL REVENUE PER TOP PERFORMING PRODUCT PER STORE LOCATION

The comparison across store locations shows that **Hell’s Kitchen generates the highest overall revenue**, supported by strong sales in **coffee, tea, and bakery**. Astoria and Lower Manhattan contribute less, with Lower Manhattan relying heavily on coffee while other categories underperform. **The top product types across all three branches—Barista Espresso, Gourmet Boxed Coffee, and Hot Chocolate—**stand out as consistent revenue drivers,

Top performing products in Hells Kitchen in terms of products sold:

- 1.Coffee: 20 187 products sold
- 2.Tea: 15 277 products sold
- 3.Bakery: 7617 products sold

TIME BUCKET OVERVIEW PER STORE LOCATION

Across all store locations, the **morning consistently generates the highest revenue**, confirming it as the busiest and **most profitable time of day for BrightLearn coffee shops**. Afternoon and evening sales contribute moderately, while night-time revenue remains the lowest. This pattern highlights the **importance of optimizing operations, staffing, and promotions during morning hours to maximize performance**, while exploring strategies to boost sales in quieter periods.

TIME BUCKET OVERVIEW PER STORE

LOCATION

Hell's Kitchen Sales Time Interval

Total Revenue per Weekday in Store Location: Astoria

Hell's Kitchen, mornings generate the highest revenue, confirming this as the most profitable time of day, while nights remain the weakest therefore to save costs staff allocated can be reduced in the evening.

For Astoria, **Wednesday stands out as the peak sales day,** outperforming other weekdays. These patterns highlight clear customer behavior trends: **mornings are consistently strong across locations,** and midweek promotions in Astoria could further capitalize on existing demand.

RECOMMENDATIONS

- Continue prioritizing roasted coffee and tea, as they are the strongest revenue drivers.
- Bundle them with complementary items (e.g., coffee + croissant combos) to increase other product options or alternatively remove low revenue items
- Use Hell's Kitchen as a benchmark for product mix and customer engagement strategies.
- Apply similar marketing and menu emphasis on coffee, tea, and bakery in Astoria and Lower Manhattan.
- Astoria: Identify local preferences and adjust product offerings to better match demand and Capitalize on Wednesday Peak launch midweek promotions (e.g., "Wednesday Specials")
- Lower Manhattan: Focus on diversifying revenue streams beyond coffee by highlighting popular items like hot chocolate or gourmet boxed coffee.
- Introduce targeted discounts or loyalty rewards on slower days/ times for the different branches (e.g., Monday or Thursday) to balance weekly revenue.
